

How to Update Firmware

- You will need a Mac or Windows computer with Wi-Fi to update the Leitz Icon firmware.
- You will also need to use a web browser such as Internet Explorer,
 Firefox, Chrome or Safari (Mac) to update your Leitz Icon printer.
- Prior to updating the printer you must download the update Firmware file (<name>.CIFF) from leitz.com/icon/support.
- It is recommended you save this to your desktop to make it easy to find when it is needed.

Step 2: Connect to Your Leitz Icon Printer

- If your Leitz Icon printer is connected to a home or office network, please skip to Step 3.
- If your Leitz Icon printer is in Soft-AP (direct) mode, it will be broadcasting a network name in the form of "ICON-xxyyzz," where "xxyyzz" represents the last 6 characters of the MAC address located on the bottom of your printer. On some printers, the bottom label will identify this as the "PrinterID".

 Just as you would do if connecting to a network in a hotel or café, open up your wireless settings, search for the ICON-xxyyxx SSID, and then connect to it.

Step 3a: Log into Control Panel

Leitz Icon Software Help

About Leitz Icon Software Open Printer Control Panel Check for Updates...

In case your Leitz Icon is connected to a network:

 If you have the Leitz Icon application installed on your computer, choose the "Open Printer Control Panel" option from the Help menu. Otherwise, open a browser, and type in:

If using Windows: Icon-xxyyzz

If using Mac OS: Icon-xxyyzz.local

Enter the User Name and Password when prompted.

Default Username: Admin

Default Password: password

(in case you changed the password and you don't remember it, you can reset it as above by making a hard reset (factory reset) of the printer, download the User Manual via www.leitz.com/icon/support to learn how)

 Make note of the current Firmware version on the bottom of the Control Panel before you update.

Leitz Icon Smart Labeling System. Firmware Version A010c-M0072-W310a

Step 3b: Log into Control Panel

In case your Leitz Icon is in Soft-AP-mode (direct, not connected to a network):

- Open your Internet Browser and type in the Leitz Icon IP for Soft-AP: 192.168.1.1
- Enter the User Name and Password when prompted.

Default Username: Admin

Default Password: password

(in case you changed the password and you don't remember it, you can reset it as above by making a hard reset (factory reset) of the printer, download the User Manual via www.leitz.com/icon/support to learn how)

 Make note of the current Firmware version on the bottom of the Control Panel before you update.

Leitz Icon Smart Labeling System. Firmware Version A010c-M0072-W310a

Step 4 : Upload Firmware File

 Select "Printer Update" to access the Firmware Uploader.

 Click "Browse" and select the CIFF-file, where stored earlier.

Click "Update", and watch the status bar for further instructions.

DO NOT CYCLE POWER OR OTHERWISE WORK WITH THE PRINTER UNTIL YOU HEAR THE PRINTER RESET.

Step 5 : Verify Update

- Wait for the printer to reset. (It will sound like it's advancing the label.)
- Quit and re-open your browser. Verify you can log in by repeating Step 3.
 Instead, you can also re-fresh the browser window.
- After login, make sure your firmware has updated by comparing the version on the bottom of the control panel with the version you started with.
